ONLINE INTERACTION APP

Name: Dara sai Lakshmi Harshitha   **Reg no:11703774**
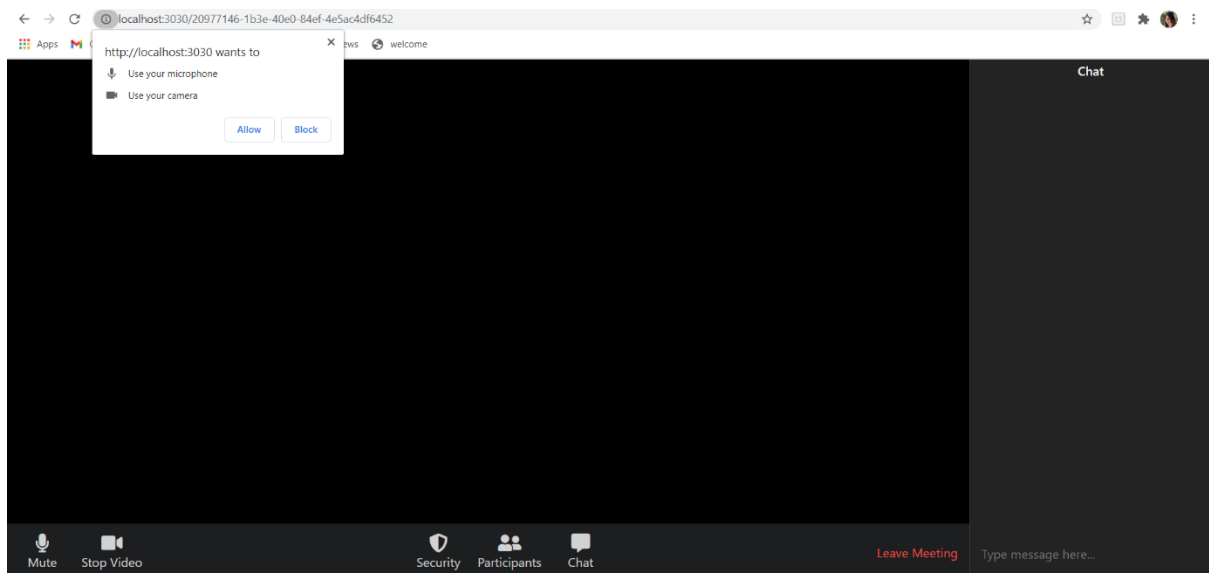

Section: KM012   **Roll No: 04**

Online Interaction App : This is very much useful for every one . We can use this kind of app for webinars, meetings, conferences, group discussions, interviews, even we can conduct classes for the children.
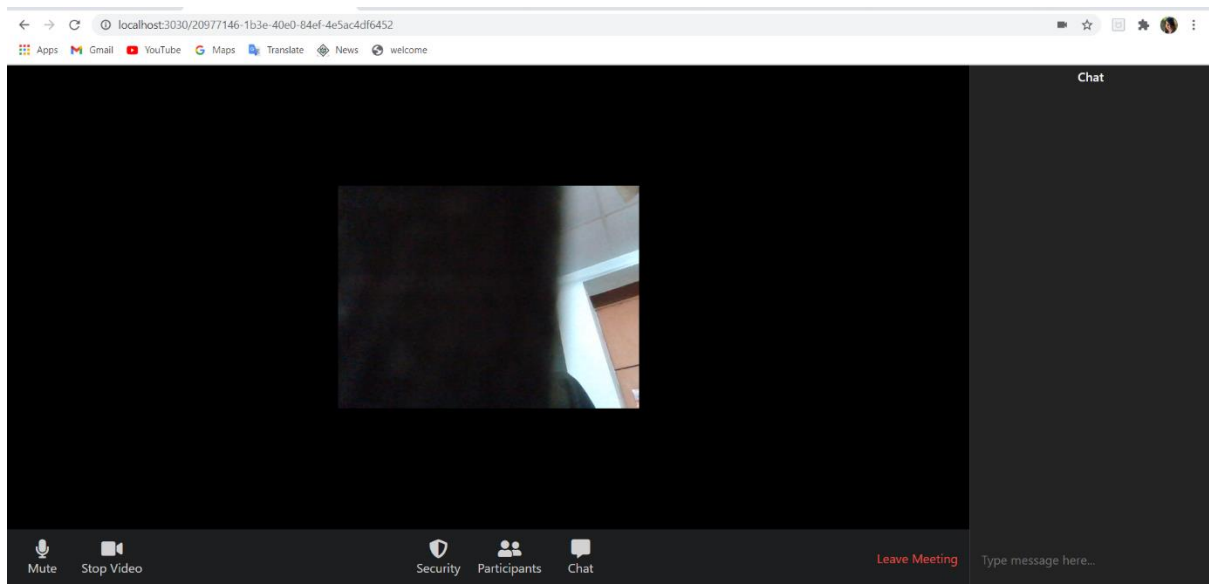

We have multiple options like chat, video, audio and many more.

PROJECT GITHUB LINK:

https://github.com/daraharshitha/onlineapp

Camera Access:

Chat option and mute ,un-mute and video on and off options:

These are few screenshots related to my project

In this project we can connect with 2 devices (people)

We should use the same url hocalhost:3030/:room-id whatever the random room-id generated should be used (copy paste)on another tab of the browser.(As I did ,shown in the above screenshot)

Then we can chat between both tabs(people) and can also have the video and can also hear the audio of one another.

(As these features cannot be shown using screenshots I'm typing here)
